### 2 Ways to Change MAC Address on Windows 10 / 8 / 7

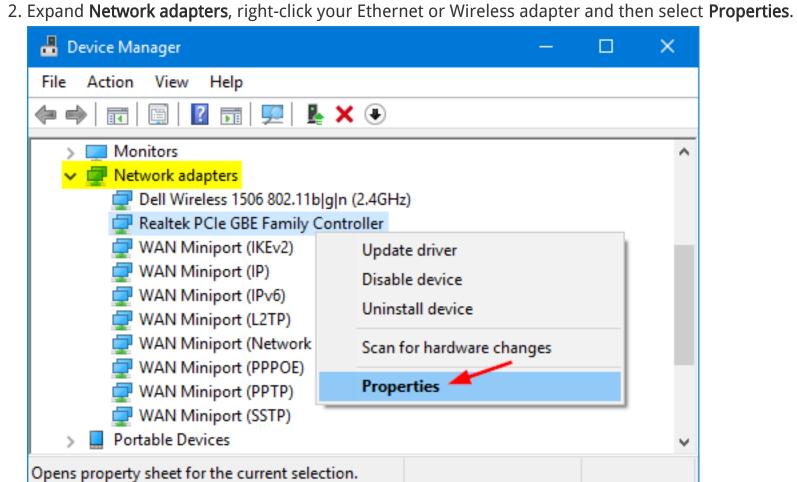

MAC address is used to identify a computer on a network, and every network card has a unique MAC address assigned during manufacturing. However, most network cards also allow you to set a custom MAC address from their device properties on Windows. This is useful when you want to test or bypass the MAC filtering settings on firewall or router. Here are 2 simple ways to change MAC address on Windows 10 / 8 / 7.

Method 1: Change MAC Address on Windows 10 / 8 / 7 from Device Manager

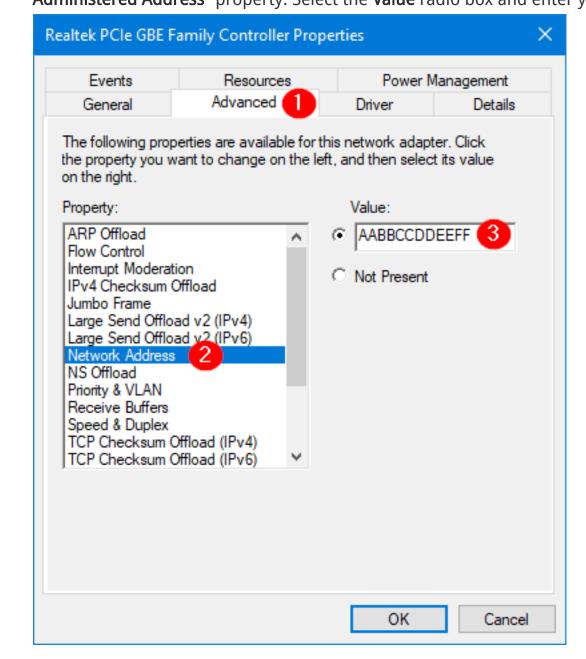

November 11th, 2017 by Admin

1. To get started, you need to open Device Manager. Just press Windows key + R on your keyboard and then type devmgmt.msc in the Run dialog box. Hit Enter.

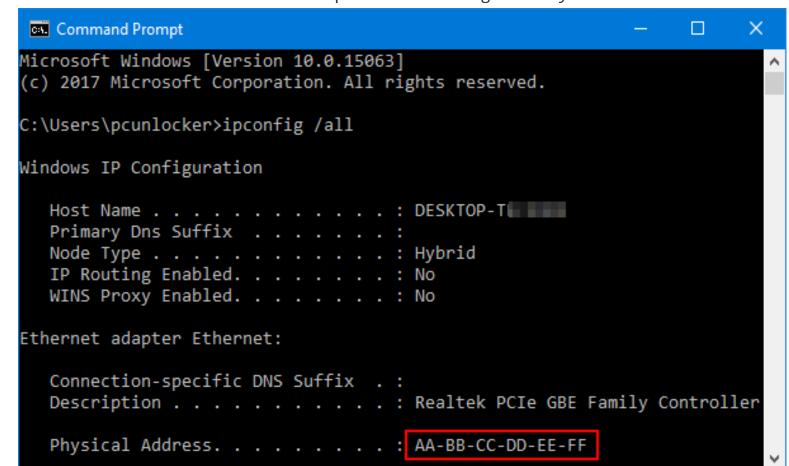

3. Click the **Advanced** tab. Within the Property list, scroll down until you find the "**Network Address**" or "**Locally Administered Address**" property. Select the **Value** radio box and enter your new MAC address.

4. Click **OK** to apply. To confirm your change, open the Command Prompt and type **ipconfig /all** and hit Enter. You should see the new MAC address show up in the line starting with "Physical Address".

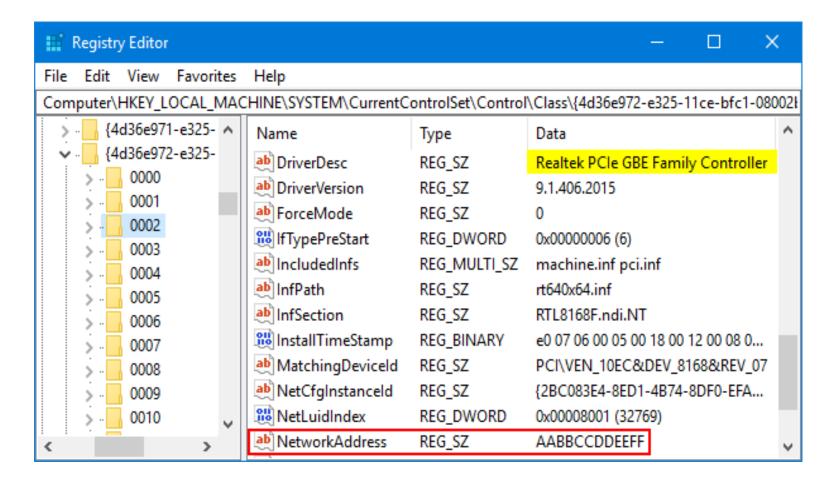

Method 2: Change MAC Address on Windows 10 / 8 / 7 from Registry Editor

1. Open the Registry Editor and navigate to the following key:

HKEY\_LOCAL\_MACHINE\SYSTEM\CurrentControlSet\Control\Class\{4D36E972-E325-11CE-BFC1-08002BE10318}

2. You should see several subkeys with names such as 0000, 0001, etc. You have to click each subkey to check the **DriverDesc** value that matches with your network card. In my example, I got the key in 002.

3. Look for the registry entry **NetworkAddress** in the right pane, and change the value as your new MAC Address. If that entry doesn't exist, right-click blank area to create a String value with the name **NetworkAddress**.

4. Close Registry Editor. Disable your network adapter and enable it again. The new Mac address will apply immediately.

# That's it!
